

Earning Review

HUBC: 4QFY21 EPS clocked in at Rs6.76, DPS Rs5.0

Event

- Hub Power Company (HUBC) profitability clocked in at Rs8.7bn (EPS Rs6.76), up 29% YoY, against profitability of Rs6.8bn (EPS Rs5.24) reported in the same period last year, cumulating into full year profitability of Rs33.7bn (EPS Rs25.97) in FY21 against Rs25.0bn (EPS Rs19.31) in FY20.
- Result is accompanied with dividend of Rs5.0 per share, taking full year payout in FY21 to Rs12.0 per share.

Impact

- We attribute rise in profitability to (1) higher dollar indexation for base plant, (2) reduced finance cost, (3) lower taxation charge, and (4) lower operation and maintenance expense.
- During 4QFY21, dollar indexation went up by ~4.4% YoY for the base plant, however dollar indexation for Narowal Energy Limited, Laraib Power and CPHGC is down by 7.8% YoY.
- Moreover, Late payment differential on trade receivables and payables decreased by ~10% YoY to ~Rs440mn during the quarter as Hub Power received Rs23.1bn in first installment of receivable to IPP's, in our view.
- During the quarter, Hub power base plant generated 78GWh at a load factor of 2.8% as compared to zero load factor in the same period last year. Hub Narowal plant dispatched 147 GWh of electricity, up by 2.6x YoY, with a utilization rate of 31.6%. We attribute higher utilization to increased electricity demand growth amid lower availability of RLNG and Hydel generation.
- CPHGC generated 2,578 GWh of electricity, up significantly by 54% YoY, at load factor of ~90% during the quarter. CPHGC profitability contribution decreased by 19% YoY to clocked in at ~Rs3.8bn.
- Laraib production increased by a mere 0.7% YoY to 144 GWh during 4QFY21, given slightly improved water flow.
- Finance cost of the company reduced by 34% YoY given reduction of 625bps in policy rate amid reduced debt levels.

Outlook

- We have an "Outperform" stance on the scrip with Dec-21 TP of Rs96.1. However, establishment of competitive market would require shifting of current PPA to take and pay basis which would substantially reduce capacity payments amid lower reliance of national grid on FO based generation, in our view.
- Moreover, termination of the contract, even on the Present Value of reduced Capacity payments ignoring competitive market structure and company's operating cost, would not provide upside to our valuations, as per our calculation.
